Drag-Race 11.44" Rear Disc Brakes with Forged-Aluminum Four-Piston Calipers

Drilled rotor shown

Red caliper option available

Available with smooth-surface, non-drilled rotors

# **Drag-Race Rear Disc Brakes**

Our drag-race rear disc brake kit features fixed, forged-aluminum, four-piston calipers in black-oxide or red-powder-coat finish and 11.44 x .35" solid or drilled rotors and billet aluminum hats; both finished in black-oxide. The bolt-together hat/rotor assembly allows worn or damaged components to be replaced easily and economically. Our enhanced-friction ceramic-formula brake pads provide smooth engagement with consistent response from a flat torque curve throughout their entire effective temperature range. The kit is available for all standard Ford housing ends and requires 15" or larger wheels. Performance applications should be limited to drag-race vehicles under 2,800 lb. A parachute is also required on any vehicle exceeding 150 mph.

#### **Forged Dynalite Caliper**

The Wilwood 11.44" rear disc brake kit uses Forged Dynalite (FDL) four-piston, aluminum, lug-mount calipers for their superior rigidity and enhanced braking performance and pedal feel. The calipers use a closed-end, internal fluid passage design that is further strengthened by four steel bridge bolts extending through the caliper body. Stressflow forging and smooth surface transitions help eliminate stress points and reduce overall caliper deflection.

FDL calipers use one-piece, 1.75"-diameter, stainless-steel pistons and high-temperature, square-faced bore seals. Stainless steel slows heat transfer to the brake fluid and improves the system's resistance to heat-induced pedal fade. This reduction in heat also increases the service life of the fluid and seals. The four individual pistons apply pressure against both sides of the rotor. Caliper fluid requirements matched to the output capabilities of commonly used factory master

Red caliper option available

are matched to the output capabilities of commonly used factory master cylinders ensuring comfortable performance in a wide range of applications.

Dynalite calipers are trouble-free and service-friendly. Vibration-dampening stainless-steel bridgeplate inserts protect the caliper body from wear caused by pad movement, greatly extending service life. Two-piece bleed screws are easily accessed at each corner of the caliper and eliminate direct wear to the aluminum body. Brake pads are also easily changed by simply removing the retaining pin and sliding the pads out.

#### **Lightweight Performance Rotors**

The kit comes standard with black-oxide-coated solid rotors constructed from a special alloy steel known for its high thermal stability and resistance to distortion. These lightweight performance rotors are designed specifically

for drag-racing applications under 2,800 lb. Rotors measure 11.44 x .35" and weigh in at a mere 5.4 lb. For more eyecatching performance and reduced weight, a drilled version weighing only 4.7 lb is available.

#### **Billet Aluminum Hat**

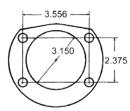

Separate billet aluminum hats reduce unnecessary weight and allow components to be easily replaced if damaged or worn. Hats use a solid-wall, cylindrical design to improve rotor stability. Their black-anodized finish improves heat dissipation, prevents oxidation, and resists scratching. Rotors and hats are secured by Grade 8, safety-wire-drilled hex bolts in an eight-bolt configuration. Hats come drilled for 1/2" wheel studs on 4-1/2", 4-3/4", and 5" five-lug bolt patterns. Hats for larger 5/8" wheel studs are drilled with 4-3/4" and 5" five-lug patterns.

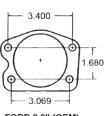

#### Applications

Housing Style	Solid Rotor	Drilled Rotor	Offset
Small GM w/ C-Clips	WW 140-0263	WW 140-0263-D	2.81″

#### **Axle Offset**

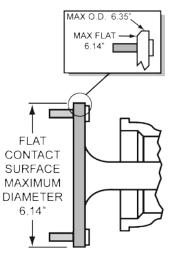

Axle offset is measured from face of housing end to outside face of axle flange.

#### **Axle-Flange Clearance**

The existing axle-flange contact surface must be no larger than 6.14" to properly seat against the flat of the aluminum hat. Outside flange diameter must be under 6.35".
