## Street-Machine A-Arms

Chassisworks' Street-Machine A-arms are designed for performance street vehicles using our g-Machine crossmember system with VariShock coil-overs or air-spring suspension. Self-lubricated polymer pivot bearings enable predictable handling and effective suspension tuning with very little maintenance, thanks to linear resistance, minimal deflection, and extremely low rate of wear. Press-fit pivot bearings and heavy-duty screw-in balljoints allow the A-arm to be easily rebuilt if ever needed. Street-Machine A-arms are constructed from mandrel-bent, 7/8 or 1 x .156" -wall, mild- or stainless-steel round tubing, creating a lightweight component durable enough for regular performance street use. With the aid of a fixture, tubes are seated into recessed faces along the billet balljoint housing to provide a high-strength,

interlocking, TIG-welded joint that angles the balljoint and ensures bind-free operation. Billet balljoint housings feature an exterior groove to enhance appearance and reduce weight. Three material finish combinations are available: paintable mild steel, black powder-coated mild steel, or polished stainless steel for show-quality appearance that outlasts chrome.

- TIG-welded, .156" -wall, tubular construction
- Available in mild- and stainless-steel versions
- Allows use of VariShock coil-over or air-spring suspension
- Easily replaceable, heavy-duty, screw-in balljoint
