

LayArm Air-Bag Suspension Systems

The LayArm line of front-suspension systems and components is an excellent choice for improving the stance and handling of many popular 1963 through 2006 GM mid-size and full-size trucks, with only minimal effort required for installation.

System packages include tubular upper and lower control arms with poly bushings, double-convoluted air bag, bolt-on upper bag mount, shock absorber, and required mounting hardware. Optional components include VariShock billet-aluminum single- or double-adjustable shocks, dropped spindles, and KP anti-roll bars.

To keep installation simple and maximize compatibility, control arms utilize the factory chassis mounts and bolt

directly to stock or aftermarket dropped spindles. LayArm lower control arms feature an air-bag mount plate, integrated lower-shock and anti-roll-bar mounts, and steering-arm stop. Arms are finished in textured-black powder coating.

■ VariShock QuickSet Series

The VariShock QuickSet series allows you to easily tune your suspension for improved ride quality and handling. Adjustment takes only a few seconds and is made with the VariShock installed on the vehicle. Readily accessible, 16-position adjustment knobs can be operated by hand or with the aid of a common allen wrench.

Chevy C10 System

Chevy C1500 ('88-98) System

Fluted premium-urethane bushings for improved grease retention and reduced friction.

Gusseted lower shock mount with specialized hardware for more tire clearance.
